

Education

Technological University of the Philippines - Visayas

Talisay City

Bachelor in Engineering Technology, Major in Computer Engineering Technology

2026

Thesis: Development of GIS-Based Cementery Information System for Interactive Mapping

Relevant Coursework: Data Structures and Algorithms, Database Systems, Operating Systems, Computer Networks, Software Engineering, Computer Architecture, Digital Electronics, Microprocessor Systems, Machine Learning, Web and Mobile Application Development

Experience

Information and Communications Technology Division

Bacolod City

Full Stack Web Developer Intern

June 2025 – July 2025

- Developed and maintained full-stack web applications using Laravel and PostgreSQL to support government service operations across multiple departments, improving processing efficiency for daily citizen requests.
- Built a Lawyer Appointment System and a One-Stop Shop platform, organizing appointment scheduling, request management, and citizen service requests into unified digital workflows.
- Deployed completed systems to the organization's environment and provided post-deployment support, maintenance, and feature enhancements.

Choros.io

United Kingdom (Remote)

Full Stack Web Developer

September 2025 – July 2026

- Developed full-stack web applications and custom websites using Laravel, Inertia.js, React, and TypeScript for 20+ clients across legal services, home interiors, plumbing, and other industries.
- Built an AI-powered legal application that generated legal documents, including loan agreements and NDAs, and integrated AI capabilities to support legal research and user workflows.
- Developed Project Pulse, a company project management platform that enabled teams to manage tasks, monitor project progress, track completion percentages, and improve collaboration through a centralized workspace.
- Developed a marketing prospecting platform automating lead discovery and data collection, supporting Meta Ads campaigns that converted 20+ leads into clients
- Implemented SEO best practices, including technical optimization, metadata, semantic HTML, structured content, and performance enhancements to improve search engine visibility and Google rankings.
- Performed quality assurance (QA) testing across client projects by identifying bugs, validating functionality, and ensuring production-ready deployments.
